

# Clinical trials

## Primary Endpoint

The difference between the total ASPECTS score of the reference standard and the total ASPECTS score calculated by Heuron ASPECTS

### Aim for clinical evaluation

- Mean diff.  $\approx$  0.04
- Limit of agreement  $\leq \pm 2.81$

### Results: Consensus vs. Heuron ASPECTS

- Mean diff. = 0.032 [-0.076 to 0.1408]
- Upper limit of agreement = 2.80 [2.615 to 2.986]
- Lower limit of agreement = -2.736 [-2.914 to -2.55]

$$\text{Difference} = \text{Consensus} - \text{cASPECTS}$$

$$\text{Mean} = \frac{(\text{Consensus} + \text{cASPECTS})}{2}$$
